

ADVANCED TREATMENTS. EXCEPTIONAL RESULTS.
THE ULTIMATE HAIR RESTORATION EXPERIENCE.

FAQ

AESTHETIC LASER PROCEDURES

Laser procedures can comfortably and effectively transform your skin in just a few treatments. Aesthetic laser procedures include:

- Laser Hair Removal
- Removal of unwanted pigment
- Vein and redness reduction
- Wrinkle reduction
- Nail fungus treatment

LASER HAIR REMOVAL

How does laser hair removal work?

The laser beam travels through the skin and targets the pigment within the hair follicle to inhibit further growth. Thus, the darker the hair, the easier that it will be to remove. The results are permanent.

How many treatments are needed, and how long do they take?

Because hair grows in cycles, it generally takes at least four treatments spaced 4-8 weeks apart for optimal results. Depending on the size of the treatment area, the procedure takes anywhere between 5-30 minutes.

Is laser hair removal painful?

No. The Clarity laser that is used at Bauman Medical emits a cryogenic spray with each laser pulse. This cools the skin and makes the procedure very comfortable, unlike other laser hair removal devices.

Is it safe for my skin type, and will it work on my color hair?

Laser hair removal can be safely achieved for all skin types with the Clarity laser. Darker hair is most easily removed, but vellus hair removal can be achieved as well.

UNWANTED PIGMENT REMOVAL

What types of pigment can be treated?

Age spots, freckles, birthmarks, benign pigmented lesions, seborrheic keratosis, and sun damage.

What is the treatment like?

The discomfort level is very mild but varies depending on the treatment area and takes only about ten minutes. The number of sessions required depends on the area to be treated and type of pigment being removed.

When will I see results?

The area treated may actually become darker during the first ten days post-procedure, but it will become noticeably lighter in the weeks that follow.

FREQUENTLY ASKED QUESTIONS

AESTHETIC LASER PROCEDURES

VEINS AND REDNESS REDUCTION

What types of vascular conditions can be treated with laser therapy?

Rosacea, facial veins, spider veins, broken capillaries, hemangiomas, and other vascular lesions that occur from sun damage, genetics, and aging.

How does laser therapy treat veins and redness?

When laser energy is absorbed by the blood vessels it converts to heat, thereby reducing or eliminating their appearance.

What is the treatment like?

The discomfort level is very mild but varies depending on the treatment area and takes only about ten minutes. The number of sessions required depends on the area to be treated and type of pigment being removed.

When will I see results?

While some veins may take some time to be broken down by the body, others will disappear immediately.
