

ADVANCED TREATMENTS. EXCEPTIONAL RESULTS.
THE ULTIMATE HAIR RESTORATION EXPERIENCE.

FAQ

THE RECRUITER

THE RECRUITER FOR STEM CELL SUPPORT:

The Recruiter is a first-of-its-kind daily supplement for optimum health, overall longevity and anti-aging, and recovery from injury. It is often used before and after hair transplants, PRP, and PDOgro™ to promote healing for faster recovery and improved hair growth results.

BACKGROUND:

Stem cells in the body are responsible for tissue regeneration and repair, and the medical significance of circulating stem cells is becoming increasingly recognized. Augmentation of circulating stem cells using cell therapy and medications has resulted in promising preclinical and clinical data for numerous degenerative conditions.

However, this approach is limited by cost, adverse events, as well as barriers to chronic administration--including the need for complex cell processing facilities only available at a limited number of medical institutions. Less invasive interventions like smoking cessation, exercise and nutritional modifications have been successful in augmenting beneficial circulating stem cells.

Recent studies have shown that the ingredients in the Recruiter improve the number of circulating stem cells in your body. This data supports its use as a stimulator of the reparative processes associated with the mobilization of stem cells.

WHAT EXACTLY DOES THE RECRUITER DO FOR THE BODY?

In two separate published peer-reviewed scientific research studies, Recruiter's ingredients have been proven to increase the number of circulating stem cells and progenitor cells in the bloodstream. These groundbreaking studies were the first-of-their-kind in demonstrating this profound stem cell mobilization effect from a nutritional supplement. The Recruiter also provides 2000 IU of Vitamin D3 per two capsules serving to support immune health as well as healthy heart, lungs, bones, weight, and mood.

HOW DOES THE RECRUITER WORK?

The Recruiter nourishes your bone marrow to release more stem cells (endothelial progenitor cells or EPCs) into the body's circulation and protects those cells from oxidative stress. It does so through a proprietary formulation that includes lactobacillus fermentum. Increased energy levels, enhanced skin quality, resistance to infection, and accelerated recovery have been reported without risk of side effects.

WHAT IS IN THE RECRUITER?

The Recruiter contains a proprietary food supplement produced by fermentation of a combination of green tea, astragalus, goji berry extracts, along with food-derived lactobacillus fermentum, together with ellagic acid, beta 1, 3 glucan, and vitamin D3.

WHY IS HAVING INCREASED CIRCULATING STEM CELLS IMPORTANT?

Stem cells are essential for natural tissue regeneration because they replace dysfunctional and dying cells with younger, more vibrant cells.

Stem cells can home to areas of injury/dysfunction once they are released into the bloodstream. Therefore it is crucial to have as many circulating stem cells as possible to repair injured cells and replace non-functioning cells.

NOTE: Your body's number of circulating stem cells is at its highest at birth. Production of stem cells starts to decline after the age of 25 years old, and some medical experts believe that low circulating stem cells are part of the aging process.

Some of your body's stem cells are produced and stored in your bone marrow. The Recruiter, with its proprietary formula, initiates the release of these stored stem cells. By mobilizing stem cells into the bloodstream, they can be more readily available to repair and rejuvenate your body's tissues.

FREQUENTLY ASKED QUESTIONS THE RECRUITER

WHAT DOES VITAMIN D3 DO FOR THE BODY?

Vit D3 supports many functions in the body. D3 is known as the “sunshine vitamin” because the interaction between your skin and sunlight synthesizes Vitamin D naturally. However, most people today are deficient in Vit D because we are spending more time indoors and using more sunscreen, so supplemental Vit D is encouraged for optimum overall health.

FUNCTIONS OF VITAMIN D3 CHOLECALCIFEROL:

- Critical for immunity against pathogens, including viruses
- Strengthen bones because it is instrumental for proper absorption of calcium
- Good for muscle function by enhancing the cell's contraction ability
- Anti-inflammatory
- Helps regulate kidney function
- Helps reduce depression, improves mood
- Helps reduce hunger by supporting leptin's action (the hunger hormone)
- Neuroprotective (may help with cognitive disorders such as Alzheimer's and dementia)
- Deficiency is linked to poor sleep

HOW DO I TAKE THE RECRUITER?

Before and After Your Procedure: 4 capsules per day

Dr. Bauman recommends a divided dose: two capsules in the morning and two capsules in the evening with food starting two weeks prior to your procedure (FUE, PRP, PDOgro, etc.), including your procedure days and continuing for at least two weeks after your procedure.

Maintenance or Every Day Dose: 2 capsules per day

Two capsules per day with food. Can be taken together or divided-doses: one in the morning and one in the evening.

WHAT ARE THE SIDE EFFECTS?

There are no known side effects of the Recruiter.
